

# Myriddian Coronavirus Disease Registry (MCDR)

Myriddian Coronavirus Disease Registry (MCDR) collects, maintains, and reports on COVID-19 incidence within a population. The MCDR serves as the central repository collecting, consolidating and analyzing data from various sources and datasets. This supports population management for the appropriate governing bodies within state/local/country, allowing for the efficient prevention and control of the Coronavirus. Myriddian's skilled team of medical personnel has significant experience working on both central and hospital registries. Combining our registry expertise with our workflow and data capabilities allows us to deliver accurate data that is accessible in the most efficient manner possible. Utilizing robotic process automation and artificial intelligence to identify clusters and patterns to anticipate further development of the Coronavirus.
